CITAČNÍ MANAGEMENT

- Vzhledem k rozsahu diplomové práce se Vám může hodit platforma pro správu (generování a úpravu) citačních náležitostí
- Citace lze:
 - Uchovávat, importovat, exportovat, třídit
 - Generovat (včetně plných citací na konci práce v Seznamu literatury)

ZOTERO – HLAVNÍ ROZHRAŇÍ

The screenshot displays the Zotero application window. On the left, there is a sidebar with 'My Library' containing folders for 'Vietnam', 'Duplicate Items', 'Unfiled Items', and 'Trash'. The main area shows a list of references with columns for Creator, Year, Title, Publication, and Date Added. The selected entry is by Alvarez et al. (2006) titled 'Biogas production from llama and cow manure at high altitude'. On the right, the 'Info' panel provides details for this item, including its type (Journal Article), title, authors (Alvarez, René; Villca, Saul; Lidén, Gunnar), abstract, publication information (Biomass and Bioenergy), volume (30), issue (1), pages (66-75), date (1/2006), series, series title, series text, journal abbreviation, language, DOI (10.1016/j.biombioe.2005.10.001), ISSN (09619534), short title, URL, access date (Monday, 22 July 2013 10:08:07 AM), archive, location in archive, library catalog (CrossRef), call number, rights, extra fields, date added, and modified date.

The identification of threshold concepts: a review of theoretical complexities and methodological challenges

Sarah Barradell

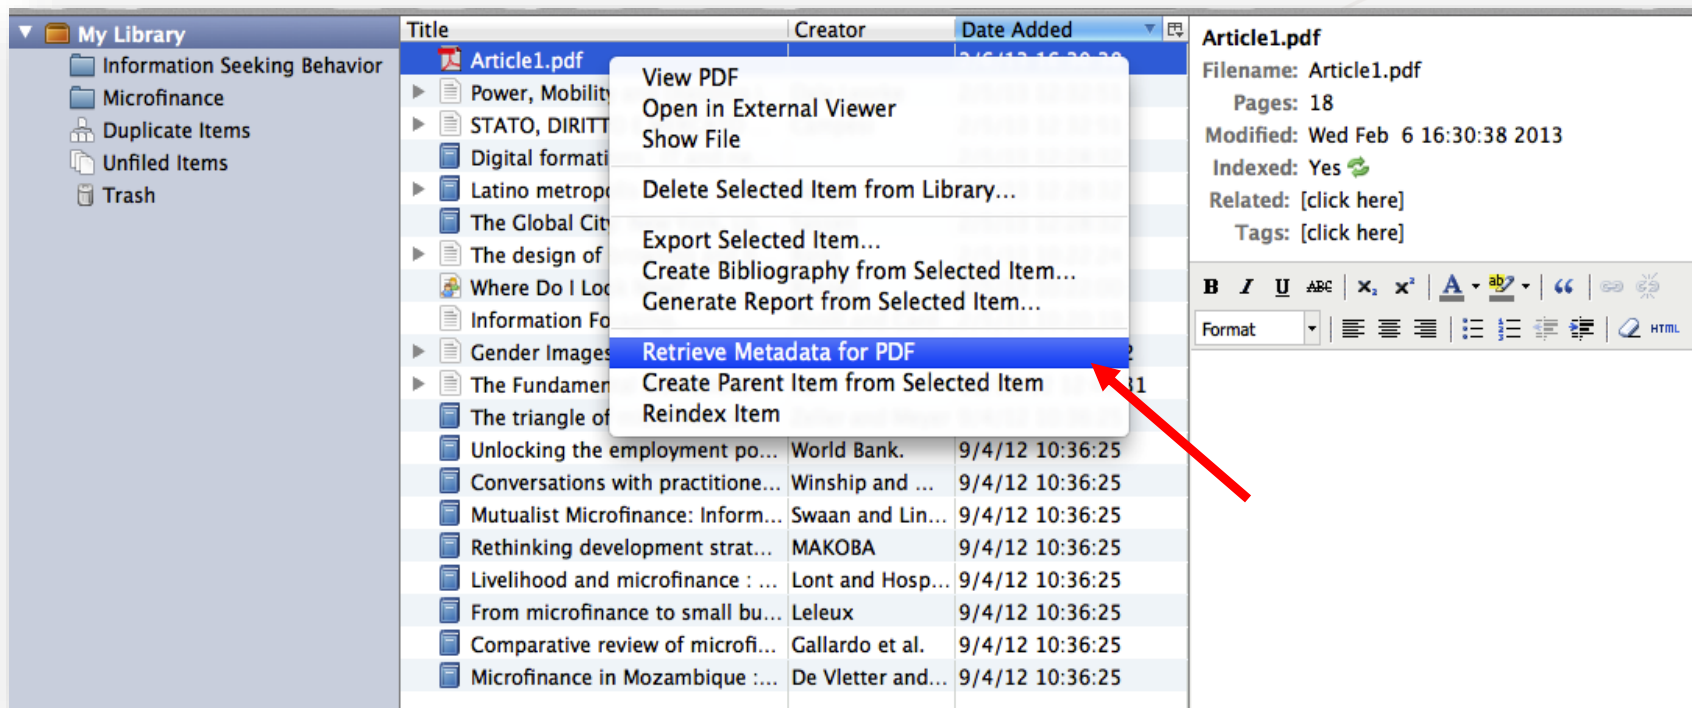

© Springer Science+Business Media B.V. 2012

Abstract While the study of threshold concepts is a growing area of research, their identification has not proven to be an easy process. However, identification matters because of the potential impact of threshold concepts on the learning experiences of students. A dialogue amongst lecturers and/or students is common to the literature on identification of threshold concepts. This dialogue, with the inclusion of educational developers, has been called 'transactional curriculum inquiry' (Cousin in *Researching learning in higher education*, Routledge, New York, 2009). Diverse methods across a

MENDELEY – INTEGROVANÝ PDF PROHLÍŽEČ

The screenshot shows the Mendeley Desktop application interface. The main window displays a PDF document from PLoS Biology. The article title is "Why Full Open Access Matters" by Michael W. Carroll, published in 2011, Volume 9, Issue 11, Pages e1001210. The article is categorized as a "Perspective". The abstract discusses the mechanics of copyright and scholarly publishing, warning about a new pseudo open-access publishing model. The main text is divided into sections: "Why Support the Open-Access Financial Model?" and "Getting open access right matters because the new publishing model is designed to increase the pace and impact of scientific communication through the power of the Internet." The interface includes a toolbar with various editing tools like Pan, Highlight, Note, Select, Copy, Paste, Rotate, Zoom, Fullscreen, and Sync. The right sidebar shows details of the document, including the journal name, year, volume, issue, and pages, as well as tags and author keywords.

Perspective

Why Full Open Access Matters

Michael W. Carroll*
American University, Washington, DC, United States of America

Scientific authors who pay to publish their articles in an open-access publication should be congratulated for doing so. They also should be aware that they may not be getting full open access from some publications that charge for publication under the "open access" label. Two features define an open-access publication: (1) the published contents are freely accessible through the Internet, and (2) readers are given copyright permission (see Box 1) to republish or reuse the content as they like so long as the author and publisher receive proper attribution [1]. Recently, some publications have begun offering an open-access option that charges for Internet publication without granting readers full reuse rights, such as Springer's Open Choice or Nature's Scientific Reports. These publishers have adopted a business model through which authors pay for immediate publication on the Internet but the publisher nonetheless keeps commercial reuse rights for itself. This is not full open access (see Box 2).

Getting open access right matters because the new publishing model is designed to increase the pace and impact of scientific communication through the power of the Internet. Immediate, free publication increases the audience for scientific research and overcomes the increasingly high price barrier to access imposed by the traditional, their demand is relatively inelastic for two reasons. First, libraries are mission-driven to acquire as broad a swath of the literature as they can afford to serve their patrons effectively. Second, subscriptions for academic journals within a given field are not readily interchangeable, unlike, say, subscriptions to news magazines, because each academic journal publishes unique research. Having their subscribers over a barrel, commercial publishers have steadily consolidated to reduce their costs while increasing profits through uncompetitive pricing [7].

The open-access model fundamentally shifts the balance of power in journal publishing, and thereby greatly enhances the efficiency and efficacy of scientific communication. In its most common form, the model shifts the costs of publication entirely to the author-funder side of the relationship so as to broaden access as far as the Internet reaches and to remove the need for any lingering usage barriers. By shifting the costs of publication entirely to the author-funder side, journals must compete head-to-head on quality and price without diminishing impact through price or usage barriers because authors have greater choice over where to publish than libraries have over whether to subscribe. This increased competition will reduce the overall costs
